ACHIEVE MORE TOGETHER

Even the most seemingly innocuous situations and experiences can trigger pets' discomfort when they are in unusual or unpredictable situations.

Pets express their discomfort in ways that disrupt the relationship with their owners by:

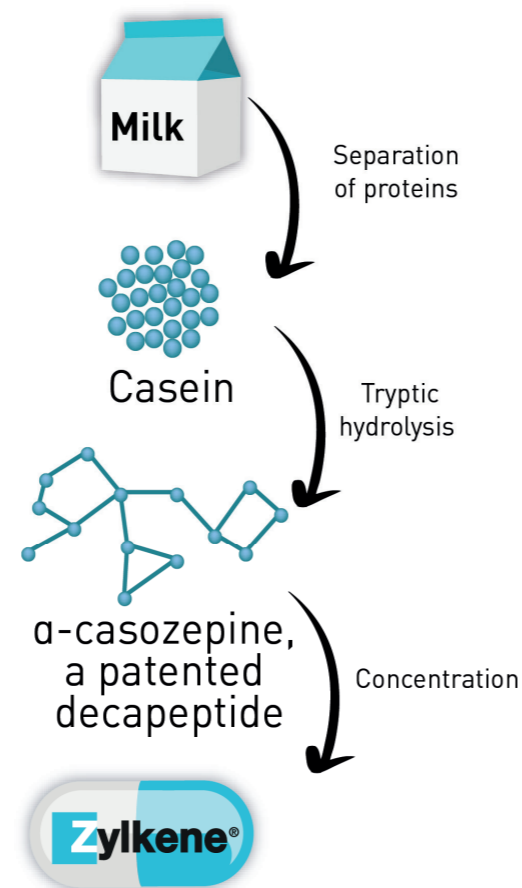

- Showing altered behaviour in relationships with people and other pets....
- Changing habits
- Excessively licking themselves
- Destroying furniture
- Playing less
- Soiling the house
- Barking more
- Hiding

A natural ingredient to help cope with life's ups and downs

Researchers have long speculated that a substance in mother's milk might be responsible for the state of relaxation newborns experienced after breastfeeding. They were proven right, with the discovery of a unique and simple ingredient called alpha caseozepine. This molecule was also found **to be useful on dogs and cats.**

Since its launch Zylkene® has been used in many common situations which pets find uneasy. Vets, behaviourists, nurses and pet owners worldwide have all found Zylkene® to be a valuable support for **helping pets adapt to new environments.**

Zylkene® can be used short term to help an animal overcome a destabilising situation

Zylkene® can also be used for longer periods of time, after consideration of other potential causes.

Zylkene® is a complementary feed which can safely be given long term. It can be given to nursing queens or bitches as well as to kittens and puppies going through weaning.

High quality standards

Our alpha caseozepine is made following **best quality standards:**

- Milk is produced in France, following **the Good Farming Practices label**. Cows are fed on natural feedstuff mainly derived from the family-size farms they're reared in
- Manufacturing process of casein hydrolysis complies with **certifications ISO 9001 and ISO 22000**

Zylkene®, always on your side for happy pets.

When facing challenging situations, they need love & Zylkene.

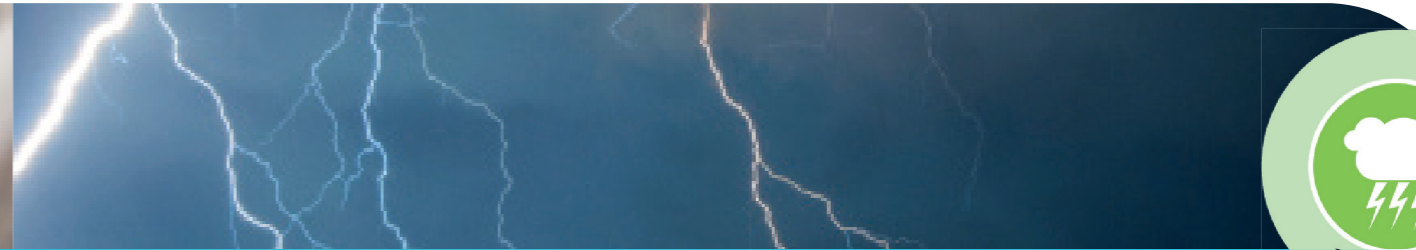

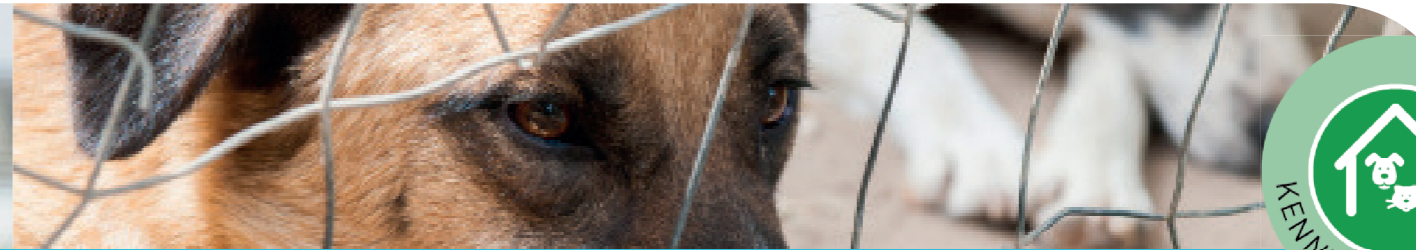

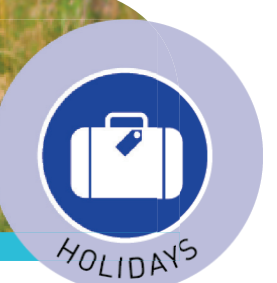

Changes in lifestyle are difficult for some pets...

Help their owners identify these situations.

Changes to their environment...

...and unusual situations.

Palatable and easy to use

Zylkene® is easy to give in one daily intake:

- Capsules contain a palatable, **water soluble powder** that appeals to both dogs and cats
- Capsules can be given whole or can be opened and the powder **mixed with food, treat or liquids**
- **Water** should be **available** at all times
- As Zylkene® is taken orally, it is present wherever the pet goes, **both inside and outside the house**

Recommended daily amounts:

	Zylkene® 75 mg	Up to 5 kg	1 capsule a day	
		5 to 10 kg	2 capsules a day	
	Zylkene® 225 mg	10 to 15 kg	1 capsule a day	
		15 to 30 kg	2 capsules a day	
	Zylkene® 450 mg	15 to 30 kg	1 capsule a day	
		30 to 60 kg	2 capsules a day	

Short Term or Long Term?
